ABSTRACT

Tabular summaries of the 158 numerical responses to the Third Followup Questionnaire items of the National Longitudinal Study of the High School Class of 1972 are presented--20,092 individuals responded. These items summarize participants' educational experience and occupational attainments from October 1974 to October 1976; continuing or revised plans about education, training, military service, and jobs; and aspirations, attitudes, and opinions. Results are given for the total sample as well as for subpopulations defined by the following classification variables: sex, race, academic ability, socioeconomic status (SES), high school program, geographic region, sex by race, and cross-classification of sex and race--each by academic ability, SES, high school curriculum, and region. Actual and weighted subpopulation sizes are presented along with the percent distributions of responses for each item for these classification variables. The percentages are based upon valid responses only. Invalid responses are defined by a standard error code and are presented separately. Responses were weighted to express results as population estimates, and to estimate the sampling reliability. (The Third Followup Questionnaire is included.) (Author/CP)

## NATIONAL CENTER FOR EDUCATION STATISTICS

"The purpose of the Center shall be to collect and disseminate statistics and other data related to education in the United States and in other nations. The Center shall . . . collect, collate, and, from time to time, report full and complete statistics on the conditions of education in the United States; conduct and publish reports on specialized analyses of the meaning and significance of such statistics; . . . and review and report on education activities in foreign countries."--Section 406(b) of the General Education Provisions Act, as amended (20 U.S.C. 1221e-1).

This is a revised version of the Research Triangle Institute Report prepared under Contract No. OEC–0–73–6666 with the Department of Health, Education, and Welfare, Education Division. It has been revised and edited preparatory to publication by the National Center for Education Statistics. Contractors undertaking such projects are encouraged to express freely their professional judgment. This report, therefore, does not necessarily represent positions or policies of the Education Division, and no official endorsement should be inferred.

## Foreword

The National Longitudinal Study of the High School Class of 1972, a survey initiated by and conducted for the National Center for Education Statistics, began in the spring of 1972 with over 1,000 in-school group administrations of survey forms to a sample of approximately 18,000 seniors. In the followup surveys, the sample included almost 5,000 additional students from sample schools that were unable to participate in the base-year survey.

This report contains tabular summaries of the numerical responses to the Second Follow-Up Questionnaire items of 20,872 individuals. These items deal primarily with the survey participants' educational experiences and occupational attainments in October 1974 along with their continuing or revised plans about education, training, and jobs as well as measures of their aspirations, attitudes, and opinions.

Continuing followup requests for data from these individuals are planned at intervals extending over six to eight years. This panel of repeated observations will permit the examination of the relationships between schooling, work, and other experiences to subsequent career choices as well as educational and labor force participation of each of the selected individuals. Such information and the resultant analyses are important to those engaged in formulating legislative proposals and educational policy.

## INTRODUCTION*

### Background and Purpose

A 1968 survey conducted by the National Center for Education Statistics (NCES) indicated that educational policymakers and researchers needed statistical data that would permit comparisons of student educational experiences with later outcomes. In response to this, NCES initiated a planning effort in the following year to survey a sample of high school graduates. A representative sample of high school seniors was to be selected, traced through postsecondary experiences including education and training, and then followed until all had had the opportunity to enter the job market.

In April 1970, leading educational researchers and administrators met with Federal officials in Washington, D.C., to advise NCES on plans for the survey. The resulting National Longitudinal Study of the High School Class of 1972 (NLS) reflected their guidance and the interests of a number of U.S. Office of Education (OE) bureaus, including the Office of Planning, Budgeting, and Evaluation, the Bureau of Postsecondary Education, the Bureau of Occupational and Adult Education, and the Bureau of Programs for the Handicapped, as well as NCES. Several advisory committees provided guidance in planning and implementing the survey. For example, one was composed of research experts and representatives of various educational organizations; another was made up of officials of State education agencies. An internal OE users' committee represented the data needs of the various offices and bureaus of the Education Division, U.S. Department of Health, Education, and Welfare (HEW).

Survey data collection instruments and procedures were designed during the 1970-71 school year and were tested on a small sample of seniors in the spring of 1971. One year later, the full-scale NLS study was initiated. Over 1,000 public and nonpublic schools and almost 18,000 seniors participated in the base-year survey. In the fall of 1973 and 1974, these same individuals were contacted along with persons from sampled schools that did not participate in the base-year survey. The followup information that was gathered concerned the activities of the responding individuals since leaving high school as well as their current plans regarding education, training, and jobs. Data collected from the fall of 1975 will be skipped, but in the fall of 1976, additional information will be sought from these young adults.

The unique orientation of the longitudinal approach (i.e., the concern with the lives and developmental patterns of individuals over a period of time) is essential for determining the effects of educational programs, policies, and practices. Such a design permits identification of temporal sequences of changes in variables, an important step in detecting and explaining their underlying relationships. Examination of the educational and occupational experiences of individuals and of the development of their aspirations, attitudes, and activities provides the broad predictive and diagnostic information needed for meaningful educational planning.

The NLS study will (1) supply the educational community with facts on the flow of young adults from high school through the postsecondary educational and occupational systems, (2) help to identify major branching or decision points that affect educational and vocational patterns in the immediate postsecondary period, and (3) aid in determining the relative importance of the factors associated with movements of individuals from one activity to another.

### Sample Design

The sample design is a stratified, two-stage probability sample of all schools, public and private, in the 50 States and the District of Columbia which contained 12th graders during the 1971-72 school year. The first-stage school sampling frame was constructed from computerized school files maintained by the OE and the National Catholic Education Association. It was divided into 600 final strata based upon the following variables:

- Type of control (public or nonpublic)
- Geographic region (Northeast, North Central, South, and West)

* The first two sections, i.e., Background and Purpose, and Sample Design, were adapted from William B. Fetters, *Student Questionnaire and Test Results by Sex, High School Program, Ethnic Category, and Father's Education*, Washington, D.C., U.S. Government Printing Office, 1975.

- Grade 12 enrollment (less than 300, 300 to 599, and 600 or more)
- Proximity to institutions of higher learning (3 categories)
- Percent minority group enrollment (8 categories, public schools only)
- Income level of the community (11 categories, public schools; 8 categories, Catholic schools)
- Degree of urbanization (10 categories)

The number of classes defined by a crosstabulation of the above stratification variables is far greater than the number of classes that could, in fact, be utilized in the stratification. Consequently, it was necessary to consolidate, or ignore in some instances, some of the stratification criteria. The final strata involved priority considerations dictated by the higher ranking of the stratification variables and judgment in consolidating the various classes to produce strata of the desired sizes.

Schools in the smallest grade 12 enrollment strata (fewer than 300 seniors) were selected (without replacement) with probabilities proportional to their estimated number of senior students. Schools in the remaining enrollment strata were selected with equal probabilities (again without replacement). The number of disadvantaged students was increased by sampling schools in low-income areas and schools with high proportions of minority group enrollments at twice the rate used for the remaining schools. Income for any area was based upon either an adjusted 1960 Census median income of the county containing the school or the average adjusted gross income determined from the 1966 tax returns with the same five-digit ZIP code as that for the school. The minority group enrollments for individual schools were determined from either the records of the Office of Civil Rights or the 1970 Census data by counties.

Within each final stratum, four schools were selected and then two of the four were randomly designated as the primary selections. The other two schools were retained as backup or substitutes and used in the sample only if one or both of the primary schools did not cooperate.

The second stage of the sampling procedure consisted of first drawing a simple random sample of 18 students per school and then selecting five additional ones as replacements for possible nonparticipants among the 18. In both cases, the students within a school were sampled with equal probabilities without replacement.

The study excluded schools for the physically or mentally handicapped, those for legally confined students, and the special situation (such as area vocational schools) where students were also enrolled in other high schools in the sampling frame. Within a school early graduates and those attending adult education classes were also excluded from the sampling.

### School Representation

Of the 1,200 primary sample schools, 948 participated in the base-year survey, 21 had no seniors enrolled, and 231 either refused to participate or could not, or they had received the request too late in the school year. There were 96 schools from the backup sample that also participated, as well as 26 other "extra" base-year schools. The latter were termed "extra" if, in the end, both primary sample schools from the stratum participated. However, they were excluded from the base-year student data file and the first followup survey prior to resurveying the nonresponding primary sample schools.

In the summer of 1973, NCES made further attempts to secure the participation of the 231 schools that had not participated in the base-year survey, and to replace the 21 schools that had no seniors. This "resurvey" activity, initiated prior to the first followup survey, involved securing school cooperation, choosing random samples of up to 18 former 1972 seniors per school, and then securing the last known address of those selected. This activity was successful in 205 of the 231 primary sample schools.

A sample of 200 school districts was also solicited during the base year to identify public schools not in the original sampling frame. Forty-five such schools were identified, 23 were randomly selected as an "augmentation" sample, and 16 of these schools participated in the first followup survey.

In summary, data were collected from students in 1,070 participating schools in the base-year survey, 1,300 schools in the first followup survey, and 1,313 in the second fol-

lowup survey. The total number of participating schools, by survey, is summarized in table 1.

### Second Follow-Up Instrument

Each sample member was asked to complete a questionnaire containing 153 questions. These questions, distributed over five major sections, sought information concerning the individual's education and work experience, family status, plans, aspirations, attitudes, and opinions. Most of the questions were forced-choice. Open-ended questions were limited to questions involving dates, income, number of hours or weeks worked, and the like. Many of the questions were the same as the ones used in the base-year and first followup surveys so as to maintain the longitudinal nature of the study, although some questions were modified or added to obtain unique information. The new questions were field tested before they were included in the survey questionnaire. The Second Follow-Up Questionnaire is included in this volume.

### Second Follow-Up Data Collection

The first step in data collection involved an extensive tracing operation to update the name and address files. On October 7, 1974, questionnaires were mailed to the last known addresses of the sample of 22,035 members whose addresses appeared sufficient and correct and who had not been removed from active status by prior refusal, reported death, or other reason. This mailout was followed by a planned sequence of reminder postcards, additional questionnaire mailings, and reminder mailgrams to nonrespondents. Active mail return efforts continued through December 1974 and by March 1975, the total number responding by mail was 15,058.

The names and addresses of those sample members who failed to mail back their questionnaires by January 1975 were turned over to RTI field interviewers. The personal interviews of 5,814 individuals increased the overall response to 20,872, approximately 94.7 percent of the initial mailout.

### Sample Weights and Nonresponse Adjustments

Since the data obtained in the survey were from a sample rather than a complete census of schools and students within schools, it is desirable to weight the sample data so as to express the results as population estimates and to assess the sampling reliability.

The basic weights used in preparing estimates from sample data were first calculated as the inverse of sample inclusion probabilities. These weights were then adjusted for base-year school and student nonresponse. Each unadjusted weight was calculated as a reciprocal of the school sample inclusion probability times the ratio of the number of seniors in a school divided by the number of individuals sampled within the school. The sum of the unadjusted student weights is then an estimate of the total number of 1972 high school seniors in the population.

A weighting class procedure was used to adjust the student weights for questionnaire nonresponse. The adjustment involved partitioning the entire student sample of respondents and nonrespondents into weighting classes. Groupings were made with respect to

the following survey classification variables—race, sex, high school curriculum, high school grades, and parents' education—in an attempt to impute to nonrespondents the Second Follow-Up Questionnaire responses to those having similar characteristics. Thus, any differential response rates in each of the weighting classes are reflected in this adjustment.

The adjusted student weight for each respondent, when applied to respondent scores on an item, allows one to compute national population estimates of the distribution of scores on that item. The weighted questionnaire responses reflect the difference in contribution that each sample member makes to the population estimate of that measure. Weighted percentage frequency distributions are derived by summing the weights associated with individuals in a given response category and then by dividing by the total of the weights across all categories.

## TABLE SPECIFICATIONS

### General Statement

The weighted percentage distributions of the response codes to items in the Second Follow-Up Questionnaire are presented in the subsequent tables. The percentages were computed based upon those members who gave valid responses. All invalid responses (e.g., missing, refusal) were excluded from the computation and are not presented in the tables. Thus, the percentage distribution presented in the table applies only to those who gave a legitimate response to the item. The problem of invalid responses is discussed in the section on Qualifications on the Use of the Data, and can be examined in the tables on Frequency Distributions for the Second Follow-Up Questionnaire (in volume II). In general, the nonresponse rate to critical questions (indicated by an asterisk (*) in the questionnaire presented in this volume) was very low.

The actual number of respondents providing the base for the percentage (actual N) is given for each row of the table along with the population estimate (weighted N). Variations in the N's from item to item may occur because of item nonresponse or failure to follow correctly the skip patterns of the questionnaire. Also, when respondents skipped items or sections about a particular area of inquiry not applicable to them, this reduced the number of item responses reported in the table.

Along with a weighted percentage distribution of responses for the population as a whole, there are weighted percentages for the subpopulations defined by the following variables: sex, race, academic ability, socioeconomic status (SES), high school program, region, sex by race, and cross-classification of sex and race—each by academic ability, SES, high school program, and region (the classification variables are further described in the following section). Individuals who could not be classified (because of missing information) as to sex, race, academic ability, SES, high school program, or a given cross-classification are not presented in the table. Thus, frequencies (both actual N and weighted N) of subpopulations shown in the table do not add to item totals because of missing subpopulation classification information. However, except in the category of academic ability, the amount of missing classification information is minimal. Of the 20,872 second followup participants, 16 could not be classified on sex; 20 on race; 206 on SES index; 22 on high school program; and 6,186 on ability. The higher number of missing academic ability indexes is due to the base-year school nonresponse previously discussed.

Some items yielded responses of a continuous nature (e.g., income, hours). The groupings or intervals for responses of those items were developed in accordance with the following criteria: meaningfulness and sufficient number of respondents in each interval, as well as compatibility with the Tabular Summary of First Follow-Up Questionnaire Data.*

Some questions were asked in a way that a respondent may provide multiple responses (e.g., What were you doing the first week of October 1974?). All response categories included in such a question are presented together in one table. In the calculation of the percentages, the denominator is the total number of respondents who gave at least one

* Kenneth A. Tabler, *Tabular Summary of First Followup Questionnaire Data*, Washington, D.C., U.S. Government Printing Office, 1976.

valid response to the question. Since some respondents may give multiple responses, the sum of percentages over response categories may, therefore, be greater than 100 percent.

### Classification Variables

For the classification subgroupings, readers should note the following:

**Sex.** Students identified themselves by sex in the base-year Student, First Follow-Up, and Second Follow-Up Questionnaires.

**Ethnicity.** Race or ethnic category was obtained from base-year Student Questionnaire item 84, item 85 from Form B of the First Follow-Up Questionnaire, or Second Follow-Up Questionnaire item 8, in that order. For ethnic categories, black denotes responses of black, Afro-American, or Negro; white refers to responses of white or Caucasian; and Latin American applies to responses of Mexican American or Chicano, Puerto Rican, or other Latin American origin. Participants who gave responses of American Indian, Oriental, or Asian-American, or Other are listed as separate ethnic categories under race. However, they are excluded when cross-classified with the other classification variables because of the limited number of observations resulting therefrom.

**High School Curriculum.** Classification of respondents by high school program (general, academic, and vocational or technical) was based upon item 2 in the Student Questionnaire or item 86 in Form B of the First Follow-Up Questionnaire. If this self-classification was not available, it was provided from an item in the School Record Information Form (SRIF). For those having both sources available, Fetters* reported an agreement of 78, 60, and 66 percent, respectively, for the academic, general, and vocational curriculums between the survey administrator's determination reported on the SRIF and the student's self-classification. These discrepancies have not been analyzed, and the reader may choose to regard any findings that involve this classification with some caution.

**General Academic Ability.** Survey members in the base year were asked to take a 69-minute test battery developed by the Educational Testing Service, Princeton, N.J., to measure both verbal and nonverbal ability in the base-year survey. Tests were selected from the Comparative Guidance and Placement Program (a guidance service for two-year colleges), Project Access (a project for minority youth), and other programs and projects. The battery of six tests (their estimates of reliability ranged from 0.78 to 0.90) produced scores in these areas:

- Vocabulary (ability to understand the English language)—15 items (5 minutes) using a synonym format.
- Picture-number associations (rote memory)—30 items (10 minutes).
- Reading (ability to read and understand short passages of nontechnical material)—5 passages, 20 items (15 minutes).
- Mathematics (ability to solve reasoning problems involving quantitative comparisons, but not requiring algebraic, geometric, or trigonometric skills)—25 problems (15 minutes).
- Letter Groups (ability to find general concepts in a nonverbal context)—25 items (15 minutes).
- Mosaic Comparisons (perceptual speed and accuracy)—116 items (9 minutes).

The academic ability measure consisted of the unweighted sum of scores on four of the six subjects in the base-year aptitude battery: vocabulary, reading, mathematics, and letter groups. Each one of the four subtest scores was first standardized to a mean of 50 with a standard deviation of 10. The observed average of the academic ability measure for the 15,625 respondents was 202.87 and the standard deviation was 33.08. The decision to apply equal weights for each test in the index was based upon the results from a principal components factor analysis with a varimax rotation.

Categories for the academic ability composite index were: high, upper quartile; middle, second and third quartiles; low, lowest quartile. The cutoff points were 225.7 for the upper quartile and 180.5 for the lowest quartile.

* William B. Fetters, *Student Questionnaire and Test Results by Sex, High School Program, Ethnic Category, and Father's Education*, Washington, D.C., U.S. Government Printing Office, 1975, p. 4.

**Socioeconomic Status Index.*** An SES composite index was derived from an equally weighted linear combination of five measures: father's education, mother's education, father's occupation, 1972 income of the family, and a specified inventory of household items. Because of high nonresponse in the base year, father's and mother's education and father's occupation were repeat items in the first followup survey, as well as in a special resurvey conducted along with the second followup to obtain this (and other) information from sample members who had failed to provide it previously.

The responses for father's and mother's education in the base year were used if present. Otherwise, the followup data were used. In either case there was a rescaling to make the two sets of information compatible by reducing the response set from nine to five categories. They are: less than completion of high school, finished high school, up to two years of training beyond high school, graduate from a four-year college, and attendance at graduate or professional school after college.

Parents' approximate income (Student Questionnaire item 93) was rescaled from ten to seven categories by combining the six $1,500 intervals from $6,000 to $15,000 into three $3,000 intervals. The resulting scale thus had equal intervals up to $18,000.

A summary measure of a checklist of 11 items available in the respondent's home was derived from Student Questionnaire and First Follow-Up Questionnaire item 94. All of them except "a specific place for study" represented a tangible possession. The results of a factor analysis showed that the weight for this item was different from the others and that it had a low correlation with the first principal component. Therefore, it was dropped from consideration in developing the household item composite of possessions in the home. Each of the remaining ten item responses was standardized to a mean of zero and a standard deviation of one. Prior to summing these standard scores on the responses, the sign of the item standard score was reversed so that high scores would reflect possession of the item, since the original response set was one for possession and two for nonpossession. The resulting sum was then converted to a mean by dividing it by the number of responses.

Item 79 in the first followup was an open-ended description of the most recent job held by the father or male guardian. The metric of occupational status of the Bureau of Census Classification of Detailed Occupational Titles was used to numerically code this question and, therefore, group jobs into categories of related occupations and kindred workers. These codes were then mapped into Duncan's level of occupational status scale using the conversion table contained in Reiss.* This information was used if the responses to Student Questionnaire item 25 were missing. This item listed 14 broadly representative occupational categories such as clerical, craftsman, operative, professional, etc., with representative examples listed under each one. For each questionnaire category, it was necessary to develop a single Duncan score based upon an average of the scores for the examples cited for each occupation response choice. For example, the socioeconomic status score for the clerical category was obtained by averaging the Duncan scores for the representative list of bank teller, bookkeeper, secretary, typist, mail carrier, and ticket agent. Thus, anyone who marked clerical on item 25 in the Student Questionnaire was assigned the Duncan average score obtained for these six examples.

The composite SES index for each individual consists of an equally weighted sum of the five components after each component was first standardized to a mean of zero and a standard deviation of one. Up to three missing data components were permitted, i.e., the index was computed for any respondent whose data record contained two or more of the five components. Each participant was assigned a code of 1, 2, or 3 depending upon whether his or her SES composite score was in the lower, middle two, or upper quartile range. The cutoffs for these quartiles were as follows: 3 = upper quartile if $\geq +.4409$; 2 = middle quartiles if $\leq +.4409$ and $\geq -.4975$; 1 = lower

* This section is adapted from G. Dunteman and S. Peng, *National Longitudinal Study of the High School Class of 1972: Planning and Activity State Analysis*, Research Triangle Institute, 1975.

quartile if ≤ .4975. So that missing data would not produce distortions, the following procedure was implemented: Subgroup means defined by cross-classifying race, high school program, and aptitude were computed for each classification factor separately and for all two- and three-way classifications. These means were substituted for the missing data. The selection of a proper mean for substitution was determined by the availability of the responses for the three stratification variables. If a respondent had all three classification variables available, the three-way classification means were used for substitutions. If a respondent had only two of the three variables, the corresponding two-way classification means were used. For other cases, only the corresponding initial category mean was used for substitution of the missing data.

**Geographic Regions.** All sample members can be classified into one of four regions: Northeast, North Central, South, and West. The states or districts in each of the regions are listed below:

- Northeast—Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, and Pennsylvania.
- North Central—Ohio, Indiana, Illinois, Michigan, Wisconsin, Minnesota, Iowa, Missouri, North Dakota, South Dakota, Nebraska, and Kansas.
- South—Delaware, Maryland, District of Columbia, Virginia, West Virginia, North Carolina, South Carolina, Georgia, Florida, Kentucky, Tennessee, Alabama, Mississippi, Arkansas, Louisiana, Oklahoma, and Texas.
- West—Montana, Idaho, Wyoming, Colorado, New Mexico, Arizona, Utah, Nevada, Washington, Oregon, California, Alaska, and Hawaii.

## SAMPLING ERROR

Since the percentages presented in this report were based on a sample, they may vary somewhat from the figures that would have been obtained if a complete population survey had been taken, using the same survey forms, procedures, and instructions. This difference between a statistic estimated from a sample and its corresponding population value occurs because of chance. Such chance variation is measured by the standard error. Standard errors for various percentages presented in this report can be estimated from table 2.

## QUALIFICATIONS ON THE USE OF THE DATA

The questionnaire results presented in the tables were based upon a first level of edit of the data and should be considered provisional. While the percentage distributions were adjusted by proper weighting processes for nonparticipants in the second followup survey, readers should be cognizant of the possible loss of information due to some invalid item responses. In general, the extent of invalid nonresponses is reflected by the response codes of 93 to 98. The information is included in volume II. The problem of invalid responses is not serious for 24 critical questions (as indicated by an asterisk (*) in the questionnaire) because special effort was made to contact members who failed to respond to these items in their returned questionnaire. For other questions or items (not indicated by an asterisk), however, the nonresponse rates could be much higher than those of critical items. Caution should be exercised in making inferences from those data.

Readers should also be cognizant of the loss of information in trichotomizing academic ability and SES for convenience of tabular presentation. Furthermore, a substantial number of respondents (6,186) did not have ability test scores for deriving ability index, and thus, care must be exercised in examining differences among ability groups. Similarly, care must be exercised in examining relationships related to the classification of high ability blacks because of their limited number in the sample.

## DIRECTIONS

This questionnaire is divided into the following seven sections:

A. General Information
B. Education & Training
C. Work Experience
D. Family Status
E. Military Service
F. Activities and Opinions
G. Background Information

Start by answering questions in Section A. You will need to answer the first question in each section, but you may not need to answer all the questions in every section. You may be able to skip most of some sections. We have designed the questionnaire with special instructions in red beside responses which allow you to skip one or more questions. Follow these instructions when they apply to you.

Read carefully each question you answer. It is important that you follow the directions for responding, which are

- **(Circle one.)**
- **(Circle as many as apply.)**
- **(Circle one number on each line.)**

Sometimes you are asked to fill in a blank—in these cases, simply write your response on the line provided. Where you are asked to circle a number, make a heavy circle. Here is an example:

**Why did you leave high school?**

**(Circle one number on each line.)**

| | My Reasons | Not My Reasons |
|---|---|---|
| Graduated | (1) | 2 |
| Entered college | 1 | (2) |
| Went to work | (1) | 2 |

When you complete this questionnaire, please return it to:

## TABLES

NOTE:

1. The percentage distribution presented in the table applies only to those respondents who gave a legitimate response to the item.

2. Frequencies (actual and weighted N's) for the subpopulations shown in the table do not add to the total because of missing classification information subpopulations.

3. The sample table illustrates or specifies the terminologies or statistics presented in the tables.

NATIONAL CENTER FOR EDUCATION STATISTICS

"The purpose of the Center shall be to collect and disseminate statistics and other data related to education in the United States and in other nations. The Center shall . . . collect, collate, and, from time to time, report full and complete statistics on the conditions of education in the United States; conduct and publish reports on specialized analyses of the meaning and significance of such statistics; . . . and review and report on education activities in foreign countries."--Section 406(b) of the General Education Provisions Act, as amended (20 U.S.C. 1221e-1).

This is a revised version of the Research Triangle Institute Report prepared under Contract No. OEC–0–73–6666 with the Department of Health, Education, and Welfare, Education Division. It has been revised and edited preparatory to publication by the National Center for Education Statistics. Contractors undertaking such projects are encouraged to express freely their professional judgment. This report, therefore, does not necessarily represent positions or policies of the Education Division, and no official endorsement should be inferred.

## TABLES

NOTE:

1. The percentage distribution presented in the table applies only to those respondents who gave a legitimate response to the item.

2. Frequencies (actual and weighted N's) for the subpopulations shown in the table do not add to the total because of missing classification information subpopulations.

3. The sample table illustrates or specifies the terminologies or statistics presented in the tables.
